## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-14, drawn to a recombinant DNA molecule comprising a promintron sequence, methods of using the sequence for expression of a DNA coding sequence and bacteria containing the recombinant sequence.

Group II, claim(s) 15 and 16, drawn to methods of using the recombinant sequence to increase nodule size.

Group III, claim(s) 17 and 18, drawn to methods of using the recombinant sequence to increase nitrogen fixation capacity.

Group IV, claim(s) 19 and 20, drawn to methods of using the recombinant sequence to increase plant biomass production.

Group V, claim(s) 21, drawn to a plant infected by a bacterium comprising a recombinant promintron sequence.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of Group I that defines an advance over the art is the use of the promintron sequence to drive the expression of a DNA sequence.

The special technical feature of Group II is the promintron sequence and its use to increase nodule size. This technical feature defines an advance over Group I because it is drawn to a different outcome from the method of Group I, therefore it represents a second method of using the recombinant sequence.

Art Unit: 1636

The special technical feature of Group III is the use of the promintron sequence to increase nitrogen fixation capacity. This technical feature defines an advance over Group I because it is drawn to a different outcome from the method of Group I, therefore it represents a third method of using the recombinant sequence.

The special technical feature of Group IV is the use of the promintron sequence to increase plant biomass. This technical feature defines an advance over Group I because it is drawn to a different outcome from the method of Group I, therefore it represents a fourth method of using the recombinant sequence.

The special technical feature of Group V is a plant infected with a bacterium comprising the promintron sequence. This technical feature defines an advance over Group I because it represents a different product (a plant) from the special technical feature of Group I (the recombinant promintron sequence).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
